Materials

RECYCLABLE

FiberPac is made from compostable materials. Designed to meet the demands and fulfill the expectations of the greenest customers in the marketplace, FiberPac has no additives, no mysterious blended components, and no confusing poly laminations. It's simply raw pulp fiber configured into an innovative shape and size that gives the food service operator a unique way to transport, insulate, and present their menu to a growing consumer audience who **highly values eco-friendly disposable food packaging.**
